

HOT HOLDING KIT SETUP

toppers.com/catering

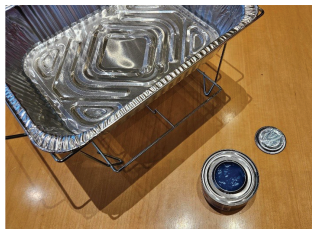

Step 1: Set up the wire rack

Place the wire rack on a stable surface. Make sure it's secure and level to hold the food pan safely. Place the aluminum steam pan inside of the rack and make sure it's securely in place.

Step 2: Fill the water pan

Place the aluminum steam pan into the rack. Fill it with 1 ½ cups of hot water. This will create steam and help maintain food temperature evenly.

Step 3: Open the fuel can

Carefully open the chafing fuel can (Sterno or equivalent) by removing the lid. Do not light it yet.

Step 4: Position the fuel

Place the opened fuel can directly beneath the steam pan, centered in the rack's designated holder area. Using a long lighter, carefully light the fuel can. Make sure it's burning steadily. Monitor periodically and replace fuel if needed.

Step 5: Add the food pan

Place the sealed pan of hot food into the water pan. Keep it covered with its lid to trap steam and heat until ready to serve.

Step 6: Open and enjoy

Once ready to serve, remove the lid and enjoy!
